Pimp Your Wifi!

1. Print this paper, do not change the height/width aspect ratio
2. Glue it to 1mm thick cardboard
3. Use a cutter and scissors to cut the two pieces out, make holes
4. Put Metal foil on the back of this piece
5. Fold the extensions on the dotted lines, after affixing, unfold.

6. Gently bend the other piece and push the extensions through the holes in this piece
7. Push the antenna of your wifi equipment through the two holes in the other piece
8. Choose the right direction for the signal
